

A Cost-Effective Wireless Solution - Inside Your Workplace!

Improve Productivity, Customer Satisfaction, and Your Bottom Line!

New Wireless solutions make it easy to 'stay in touch' anywhere on the premises.

Facilitating communications between your company's mobile employees can be challenging, particularly when it's within the workplace. A majority of wireless options are cost-prohibitive, forcing personnel to "run for the phone" whenever there's a call. The problem? Less productivity and low customer satisfaction. The good news? *There's an affordable, immediate solution readily available.* To illustrate,

The Problem: HealthSouth of Bakersfield, specializing in outpatient surgical therapy and diagnostic & inpatient acute care rehabilitation, wanted to ensure that their nurses and clinical staff could always be reached 'real time' no matter where they were in the facility. The challenge was to custom-engineer a communications system that made it easier for staff members to do their jobs efficiently and stay available by phone.

The Solution: Evans designed a multi-antenna networked wireless system to provide coverage throughout the entire 90,000 sq. foot facility. Based on an advanced microcellular design that exceeds the technology of cordless and cellular phones, and two-way radios, it integrated easily with the existing phone system. The lightweight wireless phones are small and easy to carry, and sophisticated digital radio technology provides secure conversations with excellent voice quality and no interference. Because it operates in an FCC-designated unlicensed spectrum, there are no airtime, usage, or access charges.

HealthSouth is now looking at expanding the system to other work groups in the organization.

Measurable End Benefits

This feature-rich product significantly improves the way organizations communicate and function. Measurable end-benefits include: *real-time accessibility; enhanced decision-making capabilities; reduced downtime; increased multi-tasking & productivity; improved customer service.*

What industries can benefit from Wireless Phones?

- Manufacturing:** Supervisors can roam the entire floor yet keep in touch. Production downtime is reduced because maintenance personnel are always in contact to solve problems and directly consult with outside specialists. An optional headset frees technicians to work on machinery while talking on their wireless phone. **Net: Less Production Delays.**
- Service & Support:** There's no need to 'get back' to a customer after they find a manager to obtain approval. Delays are minimized and more customers get their problems solved on the first call. **Net: Faster response to customers; greater customer satisfaction.**
- Corporate Offices:** Customers can reach the right person directly rather than being put into voice mail. Managers can quickly be contacted to make decisions, eliminating costly delays. Sales people 'close' more efficiently because they are readily accessible. Employees have more time for their jobs, with less time and money spent making return phone calls. **Net: Increased efficiency and productivity.**
- Distribution & Warehouse:** Personnel can respond to order changes/inquiries real-time, without delays caused by paging systems or telephone tag. Managers track shipments and make direct calls to suppliers quickly. Traffic managers avoid costly errors due to communication delays. **Net: Faster, more accurate order processing.**
- Educational Facilities:** Educators, administrators, maintenance, and security personnel are always in touch anywhere on campus. Interruptions from overhead paging/intercom systems are eliminated. Schools are quieter, safer, and more efficient due to improved communications and response time. **Net: Better, safer learning environment.**
