

When it comes to selecting a Communications System, shouldn't You choose the Experts?

THE PROVEN CHOICE FOR PUBLIC & NON-PROFIT AGENCIES

There's no room for a "down" communications system in your offices. We know that the public's perception is of the utmost importance. It's crucial that your communications network is reliable, and that all calls get through, whether it's to the 911 Dispatch or any other department. **And in the event of an emergency, you want the assurance of prompt 24/7 local technical service to get you up and running as quickly as possible. A dependable vendor is vital.**

We recognize that the right communications system is essential to being effective. You require a quality system that fits within your approved budgets, yet can be easily and economically expanded to accommodate moves, adds and changes, and serve your future growth. The system must present your agency as having a professional image, capable of seamlessly moving calls anywhere in the organization, no matter how many different departments exist. And it has to be able to adapt to new technologies, such as desktop applications, network/data connections, and internet access. Plus it must have powerful Call Accounting software so that you can correctly monitor call patterns, and properly allocate costs to the correct departments.

You appreciate the convenience of "one-stop shopping", economically sourcing all of your communication needs through one preferred vendor. As a market leader in government, public, and non-profit agency communications systems, data applications, unified messaging and CTI (computer telephony integration), **EVANS** is there to support your objectives.
